

NIMSPRO3

Is NIMSPRO3™ Open Source?

No, NIMSPRO3™ is **not** Open Source. NIMSPRO3™ is proprietary software offered with a proprietary license that must be accepted to use the software.

The legacy NIMSPRO3™ 1.x was originally released by FutureFD under Open Source licensing terms, and it will continue to be offered under the original Open Source licensing.

NIMSPRO3™ is completely new technology from the ground up, and it does not reuse any of the original NIMSPRO3™ 1.x source. NIMSPRO3™ represents several years of development and a huge investment of resources and money by C3 Pathways.
